### Lennox Commercial Wins Architectural Products Magazine Product Innovation Award

**DALLAS, TX (November 15, 2011)**—Lennox' [SunSource® Commercial Energy System](#) is the recipient of the Architectural Products magazine 2011 Product Innovation Award (PIA). This award recognizes products, materials and systems innovation that leads commercial and institutional design to new heights.

With judging and evaluation of products and systems from a distinguished panel of 44 architects and specification specialists skilled in product evaluation, the PIA program awards manufacturers based on attributes, qualities, functionality and/or performance beyond industry standards.

Lennox' SunSource Commercial Energy System—the first and only commercial HVAC system to integrate directly with solar power—was awarded as an innovator in the HVAC/Ventilation category.

Designed to reduce business energy spending and emissions, the SunSource Commercial Energy System uses the sun's clean, free energy to provide heating and cooling to buildings, while helping to reduce their carbon footprint. Integrating easily with Lennox' Energence® rooftop unit that already achieves up to 18 SEER, the SunSource system can provide effective efficiency levels of 34 SEER and beyond<sup>6</sup>.

"We are proud to be honored as an innovator in the HVAC industry and as a leader in cutting-edge building products," said Mike Walker, Director of Product Management and Marketing, Lennox Commercial. "Our system continues to garner accolades for its industry-leading efficiencies that far exceed other rooftop units on the market and potentially help buildings achieve a net zero energy status."
