Aircuity Ensures Indoor Environmental Quality while reducing your HVAC Energy in your Healthcare Facility

Healthcare facilities require special attention to indoor environmental quality (IEQ) to ensure the safety of its patients and healthcare workers against hospital acquired (nosocomial) infections and occupational diseases. The assessment of IEQ risks to building occupants has become a complex and challenging issue for hospital owners and facility managers. An increasing number of hospitals are turning to Aircuity's solutions to ensure IEQ while reducing their HVAC energy in applications including operating rooms, laboratories and research facilities. The Aircuity OptiNet system serve to better manage in critical and semi-critical areas coupled with the Aircuity Advisor Services, provides data collection, trending and online reporting to reassure medical staff that the air quality is maintained above and beyond levels that promotes healthy and healing environment.
